

Case Study Title: Citizen and Passport Management System

SOLUTION

- Open Eclipse.
- Go to File > New > Maven Project.
- Choose Create a simple project (skip archetype selection) → Click Next.
- Group ID: com.example

Artifact ID: CitizenPassportHibernate
→ Click Finish.

1. // pom.xml

```
<project xmlns="http://maven.apache.org/POM/4.0.0"
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xsi:schemaLocation="http://maven.apache.org/POM/4.0.0
        http://maven.apache.org/xsd/maven-4.0.0.xsd">
    <modelVersion>4.0.0</modelVersion>
    <groupId>com.example</groupId>
    <artifactId>CitizenPassportHibernate</artifactId>
    <version>1.0-SNAPSHOT</version>

    <dependencies>
        <!-- Hibernate Core -->
        <dependency>
            <groupId>org.hibernate.orm</groupId>
            <artifactId>hibernate-core</artifactId>
            <version>6.4.4.Final</version>
        </dependency>

        <!-- JPA API -->
        <dependency>
            <groupId>jakarta.persistence</groupId>
            <artifactId>jakarta.persistence-api</artifactId>
            <version>3.1.0</version>
        </dependency>

        <!-- MySQL JDBC Driver -->
        <dependency>
            <groupId>com.mysql</groupId>
            <artifactId>mysql-connector-j</artifactId>
            <version>8.3.0</version>
        </dependency>

        <!-- Logging -->
        <dependency>
            <groupId>org.jboss.logging</groupId>
            <artifactId>jboss-logging</artifactId>
            <version>3.5.0.Final</version>
        </dependency>
    </dependencies>
</project>
```

2. In MySQL Wrokbench :

```
CREATE DATABASE citizen_passport_db;
```

```
USE citizen_passport_db;
```

3. Create 3 packages in src/main/java

```
com.example.app
```

```
com.example.entity
```

```
com.example.util
```

4. Create class Passport----→ com.example.entity

```
package com.example.entity;
```

```
import jakarta.persistence.*;
```

```
@Entity
```

```
public class Passport {
```

```
    @Id
```

```
    @GeneratedValue(strategy = GenerationType.IDENTITY)
```

```
    private int id;
```

```
    private String passportNumber;
```

```
    @OneToOne(mappedBy = "passport")
```

```
    private Citizen citizen;
```

```
// Getters & Setters
```

```
    public int getId() { return id; }
```

```
    public void setId(int id) { this.id = id; }
```

```
    public String getPassportNumber() { return passportNumber; }
```

```
    public void setPassportNumber(String passportNumber) {
```

```
        this.passportNumber = passportNumber; }
```

```
    public Citizen getCitizen() { return citizen; }
```

```
    public void setCitizen(Citizen citizen) { this.citizen = citizen; }
```

```
}
```

5. Create class Citizen ----→ com.example.entity

```
package com.example.entity;
```

```
import jakarta.persistence.*;
```

```
@Entity
```

```
public class Citizen {
```

```
    @Id
```

```
    @GeneratedValue(strategy = GenerationType.IDENTITY)
```

```
    private int id;
```

```
    private String name;
```

```

@OneToOne(cascade = CascadeType.ALL)
@JoinColumn(name = "passport_id")
private Passport passport;

// Getters & Setters
public int getId() { return id; }
public void setId(int id) { this.id = id; }

public String getName() { return name; }
public void setName(String name) { this.name = name; }

public Passport getPassport() { return passport; }
public void setPassport(Passport passport) { this.passport = passport; }
}

```

6. In src/main/resources → create new file named hibernate.cfg.xml

```

<?xml version="1.0" encoding="utf-8"?>
<!DOCTYPE hibernate-configuration PUBLIC
"-//Hibernate/Hibernate Configuration DTD 3.0//EN"
"http://.hibernate.sourceforge.net/hibernate-configuration-3.0.dtd">
<hibernate-configuration>
<session-factory>
<!-- DB Config -->
<property
name="hibernate.connection.driver_class">com.mysql.cj.jdbc.Driver</property>
<property
name="hibernate.connection.url">jdbc:mysql://localhost:3306/citizen_passport_
db</property>
<property name="hibernate.connection.username">root</property>
<property
name="hibernate.connection.password">your_password</property>

<!-- Hibernate Properties -->
<property
name="hibernate.dialect">org.hibernate.dialect.MySQL8Dialect</property>
<property name="hibernate.show_sql">true</property>
<property name="hibernate.format_sql">true</property>
<property name="hibernate.hbm2ddl.auto">update</property>

<!-- Mapping Classes -->
<mapping class="com.example.entity.Citizen"/>
<mapping class="com.example.entity.Passport"/>
</session-factory>
</hibernate-configuration>

```

7. In package com.example.util: create class HibernateUtil

```

package com.example.util;

import org.hibernate.SessionFactory;

```

```

import org.hibernate.cfg.Configuration;

public class HibernateUtil {
    private static final SessionFactory sessionFactory;

    static {
        try {
            sessionFactory = new Configuration().configure().buildSessionFactory();
        } catch (Throwable ex) {
            throw new ExceptionInInitializerError(ex);
        }
    }

    public static SessionFactory getSessionFactory() {
        return sessionFactory;
    }
}

```

8. Create class App in package com.example.app

```

package com.example.app;

import com.example.entity.Citizen;
import com.example.entity.Passport;
import com.example.util.HibernateUtil;
import org.hibernate.Session;
import org.hibernate.Transaction;

public class App {
    public static void main(String[] args) {
        Session session = HibernateUtil.getSessionFactory().openSession();
        Transaction tx = session.beginTransaction();

        // Create Passport
        Passport passport = new Passport();
        passport.setPassportNumber("A1234567");

        // Create Citizen
        Citizen citizen = new Citizen();
        citizen.setName("John Doe");
        citizen.setPassport(passport);

        session.persist(citizen); // Will save both due to CascadeType.ALL

        tx.commit();
        session.close();

        System.out.println("Citizen and Passport saved successfully!");
    }
}

```

Right-click App.java → Run As → Java Application.

OUTPUT CONSOLE:

Hibernate:

```
create table Citizen (
    id integer not null auto_increment,
    name varchar(255),
    passport_id integer,
    primary key (id)
) engine=InnoDB
```

Hibernate:

```
create table Passport (
    id integer not null auto_increment,
    passportNumber varchar(255),
    primary key (id)
) engine=InnoDB
```

Hibernate:

```
alter table Citizen
drop index UK_rqf5e7eq8wwfdpflhg6u36pxv
```

Hibernate:

```
alter table Citizen
add constraint UK_rqf5e7eq8wwfdpflhg6u36pxv unique (passport_id)
```

Hibernate:

```
alter table Citizen
add constraint FKc915p6km4eh935l56vr4pckfs
foreign key (passport_id)
references Passport (id)
```

Hibernate:

```
insert
into
    Passport
    (passportNumber)
values
    (?)
```

Hibernate:

```
insert
into
    Citizen
    (name, passport_id)
values
    (?, ?)
```

Citizen and Passport saved successfully!

Now go to MySQL workbench

In queries : SELECT * FROM Citizen; ---→ execute

The screenshot shows the MySQL Workbench interface. In the top window, titled 'Query 1', there is a SQL editor containing the following code:

```
1 • create database hibernate;
2 • USE citizen_passport_db;
3 • SELECT * FROM Citizens;
4
```

Below the editor is a 'Result Grid' showing the results of the last query:

	id	name	passport_id
▶	1	John Doe	1
●	HOLLOW	HOLLOW	HOLLOW

To the right of the result grid is a sidebar with icons for 'Result Grid', 'Form Editor', and 'Field Types'. Below the result grid is an 'Action History' window titled 'Citizen 1' with the following content:

Action Output	Time	Action	Message
1	00:27:34	CREATE DATABASE citizen_passport_db;	1 row(s) affected
2	00:28:00	USE citizen_passport_db	0 row(s) affected
3	00:44:44	SELECT * FROM Citizen LIMIT 0, 1000	1 row(s) returned

Buttons for 'Apply', 'Revert', and 'Close' are at the bottom of the history window.

SELECT * FROM Passport; → execute

The screenshot shows the MySQL Workbench interface. In the top window, titled 'Query 1', there is a SQL editor containing the following code:

```
1 • create database hibernate;
2 • USE citizen_passport_db;
3
4 • SELECT * FROM Passport;
5
```

Below the editor is a 'Result Grid' showing the results of the last query:

	id	passportnumber
▶	1	A1234567
●	HOLLOW	HOLLOW

To the right of the result grid is a sidebar with icons for 'Result Grid', 'Form Editor', and 'Field Types'.
